DETAILED ACTION

Applicant's arguments filed 10/06/06 have been fully considered but they are not persuasive. See argument below.

I. Rejection of claims 51-56 under 35 USC 112, 1st paragraph will be maintained in light of amendment filed 10/06/06 for reason on record and reason as follows. Claims 47-50 and 89 are added to this rejection. Applicant argues that USPN 5753600 discloses a broad range of benzethonium salts can be used as antibacterial agents and for this reason the rejection of record should be withdrawn. Examiner agrees that USPN '600 list numerous benzethonium salts as antibacterial agents. However, Examiner would like to point out the claims in instant invention are to synergistic combinations comprising a benzethonium salt and dehydroacetic acid and salts thereof. On the other hand, Applicant only shows synergism for a composition comprising benzethonium chloride and dehydroacetate, which are specific species in the benzethonium salt and dehydroacetic acid salt genus, respectively. Applicant's specification is not enabled for all species in the benzethonium salt and dehydroacetic acid salt genus based on a showing for composition comprising only a single species from each genus. The reason being that species within each genus differ in size, functionality, polarity as well as other chemical and physical properties all of which will affect a compound's activity. If fact, certain chemical functionalities of the claimed genus may yield antagonistic activity. Therefore absent a showing of a number of species in the genus covering a broad range of functionality and size, the 112 rejection of record is maintained. Applicant specification is enabled for a synergistic mixture comprising benzethonium chloride and dehydroacetate based on examples provided in the specification. Applicant specification is not enabled

Art Unit: 1616

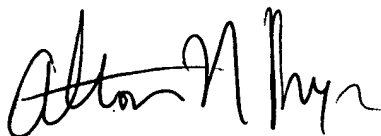

for all benzethonium salts combined with dehydroacetic acid and all salts thereof since applicant only provides synergistic results for benzethonium chloride as the benzethonium salt and dehydroacetic acetate as the dehydroacetic acid salt. Note no examples of synergism have been provided for dehydroacetic acid.
